

CAO REPORT

Oct 11, 2022 ~~Two Hills~~

1. **HVAC:** Furnaces have been removed and the new one is on the stand. They are currently working on the ducting and should be done installation next week.
2. **Ice Plant:** The leak has been traced to the top of the compressor so it should be an easy repair to one side of the valve. Over the summer we will do a complete repair to both sides of the valve (gaskets and seal) 100lbs of hydrogen leaked over the weekend so the pressure test was needed.
3. **Water Restriction:** We are currently at a level B water restriction, we have put notice in the water bills, website and social media to ask residents to limit their water usage until October 22.
